Art Unit: 1724

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 21-24 and 33 drawn to an apparatus for treating a material, classified in class 210, subclass 209.
- II. Claims 25-32 and 34-44, drawn to a process for removing contaminants from a material, classified in class 210, subclass 749+.

The inventions are distinct, each from the other because:

Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the apparatus of Group I could be used in another process, different from that of Group II. For example, this device could be used to dry a wet solid, instead of removing contaminants from this material, since the injector pipes of this device could be used to introduce hot air, instead of remedial water, into this material.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and divergent subject matter, and

Art Unit: 1724

because the searches for the individual Groups are not coextensive, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

In addition to the above noted restriction requirement, an election of species is also required.

This application contains claims directed to the following patentably distinct species of the claimed invention:

(1) remedial water species as disclosed in the paragraph bridging pages 6 and 7 of the specification (e.g. containing ozone, hydrogen peroxide, chlorine, etc.); and

(2) contaminant species as disclosed in the paragraph bridging pages 11 and 12 of the specification (e.g. microorganism, chemical toxin, heavy metal, etc.).

Applicant is required under 35 U.S.C. 121 to elect a single disclosed remedial water species and a single disclosed contaminant species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 21-24 and 33 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected

consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, Applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, Applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should Applicant traverse on the ground that the species are not patentably distinct, Applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the Examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to I. Cintins whose telephone number is (703) 308-3840. The examiner can normally be reached on Monday through Friday from 8:30 AM to 5:00
